

JS BC Detect helps security testers to analyze and automatically discover DOM Based Cross Site Scripting issues thanks to its Hybrid IAST Engine along with the Smart Fuzzer module.

BC DETECT

JS BC Node is the security suite for your NodeJS stack. Easily to be integrated into your current Secure Development Lifecycle, BC Node is the RASP/IAST solution that enables your team to address and mitigate security flaws.

BC NODE

JS BC Developer integrates into the TDD/BDD/QA workflow and enables developers to automatically pinpoint and remediate security issues on their codebase.

BC DEVELOPER

BC PROTECT defends the production environment by shielding users from DOM attacks in real time.

BC PROTECT
