

Verizon Edgecast Security Advisory Services

Leverage security expertise, deep network insights and operational excellency to optimize your security posture

Keeping a website secure is an extremely challenging job. Cyber attacks happen every day, and attack types are constantly evolving. Our Security Advisory Services provides our customers with a valuable service: easy access to security experts who can help you maintain your application's availability and uptime, providing your online presence and applications with the ultimate protection.

Keeping up with the evolving security landscape is a full-time job

Managing your security tools and keeping up with the latest in the threat landscape can be a full-time job; especially since the nefarious parties are ever evolving in finding ways to steal content and/or break your website. Managing all this can be a challenge especially when it is not your primary responsibility, and you don't have the proper professionals on staff to handle this scenario.

It's not easy to have access to the right security tools and experts

Even with access to the right security tool set, one needs the knowledge on how to use those tools appropriately and effectively. An aggressive approach may potentially block legitimate users; a lenient approach might allow nefarious users to gain access. Your security configurations need to be tuned just right.

Taking a proactive approach is extremely difficult

The cyber security landscape is a moving target; dealing with security threats becomes a reactive practice. Getting in front of threats will be a perpetual challenge faced; even with the right tools.

Benefits

- Certified security professionals
- Deep product knowledge
- Expertise in Edgecast CDN DDoS, Web Application Firewall and Rate limiting
- Broad visibility into threat landscape
- Understanding of customer's unique challenges
- Extended member of customer's security team
- Long-term, collaborative relationship
- 24 x 7 peace of mind

With our Security Advisory Services you can:

Make confident security decisions about your website

The Verizon DEFEND Web Application Firewall (WAF) is a great defense against security attacks, but knowing how to use it effectively for your specific application use case is an added challenge. With our Security Advisory Service, you can have knowledgeable security professionals working with you to ensure maximum efficiency of your security tools. You'll have access to experts that can educate you about attacks, plus security architects will review with you on a regular basis on how to read and respond to the data provided to you.

Augment your staff with security experts

We designed our powerful WAF toolsets to be easy to use and respond quickly to the ever-evolving security landscape. Let our security architects fine-tune the WAF for you to ensure maximum availability and performance with minimum security risks.

Protect your applications even before an attack hits

Our security architects are a highly specialized team that have their finger on the pulse of the internet. Web and mobile applications are constantly being attacked, and our engineers are always watching and preparing to respond to the attacks. Their primary focus is to react and respond as quickly as possible, often circumventing many dangerous scenarios even before they happen.

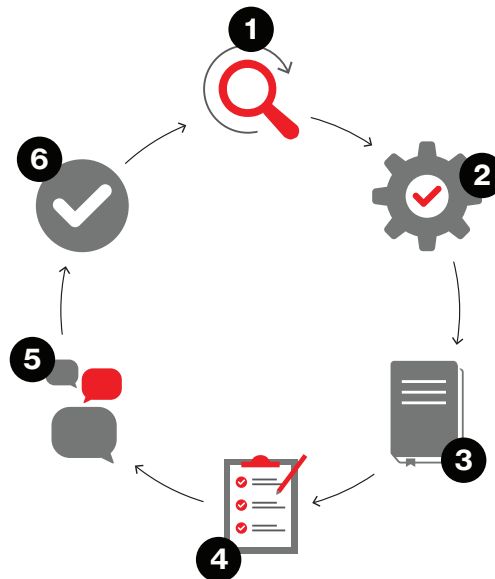

Who needs the Verizon Edgecast Security Advisory Services?

The Verizon Edgecast Security Advisory Services are for current and future WAF customers looking to optimize their security results. While our comprehensive Web Application Firewall portal includes APIs for security automation, we recommend that you don't leave something as important as security to on-the-job training. Hackers are always evolving their methods and are finding creative ways to circumvent security measures. With Edgecast Security Advisory Services, you are leveraging the aggregate expertise of skilled security professionals that have experience gained from dealing with hack attempts. We strongly encourage you to explore this service, especially if you are looking to put this on a current resource on a part-time basis.

How does it work?

The Verizon Edgecast Security Advisory Services provides additional support by a security architect on an ongoing basis to help you ensure your WAF is finely tuned and always updated to protect against the latest threats. By leveraging this service, you will enjoy regular support from a certified Security Solution Architect (SSA) to help you on a set-time interval (weekly, bi-weekly, monthly).

In addition, you will be able to work with a dedicated security architect for all your WAF needs. This designated security engineer can be accessed during regular office hours via phone, email or conference calls as necessary. Your dedicated security architect may also visit your location as necessary to train, advise and collaborate with your security personnel.

Extend your security team with regular monitoring and proactive consultation

- 1 Review events from last period.
- 2 Update provided on approved WAF changes since last meeting.
- 3 Learn about changes happening in technical environment.
- 4 Audit performed regularly on existing policies and configurations.
- 5 Propose WAF and security configuration changes.
- 6 Implement approved changes.

Enjoy premiere web protection with Edgecast Security Advisory Services.
