

ARM Cyber Security

Capability Statement

Cyber Security specialists

ARM Cyber Security is a team of recruitment specialists operating within various cyber security niche areas. Operating in this space since 2005, we work closely with our clients to help them connect with the very best specialist skilled talent. We have a wealth of experience of working with specialist security vendors, enterprise level manager security service providers and professional service providers, as well as various end-user clients growing their in-house security capabilities.

- Digital forensics and incident response
- Perimeter / infrastructure / network security
- IAM (identity & access management)
- PKI (public key infrastructure)
- Cyber security & technology sales
- Governance, risk & compliance
- Information assurance & data protection
- Cryptography
- OT & SCADA security
- Threat & vulnerability management
- Penetration testing & application security
- Security analysis, intelligence & operations (SOC & SIEM)

We are experts in placing professionals in roles ranging from graduate through to business leaders, such as directors, CISOs and global management professionals. Whether the requirement is for a one-off hire or an entire project team. We can source skilled cyber security talent in a wide range of roles, including, but not limited to: BAU support, inside sales, account managers, professional services consultants, business development managers, architects, managers - sales and technical, pre-sales consultants, customer success managers and technical engineers.

We are always evolving to align ourselves with this fast-changing sector and as such, have additional cyber security specialist resource on-hand in other areas of the business to assist with non-standard recruitment projects and programmes.

Market-proven

Client profile

We work with a broad spectrum of clients, continually sourcing and supplying the calibre of niche technical talent that match their exacting requirements. Our business relationships are built on integrity, openness and a realistic and consultative approach to recruitment. We are extremely proud of our client retention record, which is a result of our long-term reciprocal partnerships. The companies below demonstrate the variety of clients we support on a daily basis:

"The HP ESS Associate Programme sources contingent labour to supplement our permanent workforce. The ARM team has the ability to quickly identify strong information security candidates. They demonstrate commitment to fill our roles quickly with appropriately skilled candidates and have built a good network of candidates they can draw upon for the fulfillment of our requirements."

- **Chris Moore**
EMEA Business Operations Manager
HP ESS (now DXC Technology)

PERFORCE

"I have worked with ARM to fill difficult to source roles for a number of years. Rather than just push CVs at me, the team at ARM take the time and effort to understand the roles my company is filling, discuss all the factors that go into making the hiring decision and set about finding quality candidates. To date, ARM has consistently introduced high calibre people, many of whom were hired. I view them more as a business partner than a recruitment agency."

- **Savinder Chauhan**
Director of Technical Operations EMEA & APAC
Perforce Software
